

Sample HomeVision Home Automation Controllers are from Custom Solutions, Inc. Web site

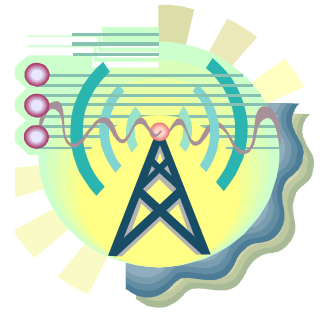

How

Smart

Is

the

House?

A smart house is a home that uses a central unit called a Home Controller (like the ones shown above) to integrate its various automation systems.

THIS IS WHAT HAPPENS WHEN SCIENCE AND TECHNOLOGY MEET THE HOME BUILDER!

Imagine a remote control that not only changes the TV channels but also:

- ✓ instantly shows the name and phone number of callers on your TV screen
- ✓ controls all audio/video equipment in your home
- ✓ turns any light on or off plus opens or closes the garage door without getting up from your chair
- ✓ will change the temperature in the house without getting out of bed

Or imagine using a video cell phone to:

- ✓ see who is at your door and talk to them when you are not at home

Interested in a career in home integration technology?
Maybe YOU can make the Smart House smarter!
